ORACLE NETSUITE

NetSuite is a powerful enterprise resource planning (ERP) and customer relationship management (CRM) system that can streamline and automate many of your business processes.

But did you know that it can also be integrated with other systems to create an even more powerful and efficient fully integrated platform?

NETSUITE INTEGRATION SERVICES

EDI2XML offers a wide range of NetSuite integration services that enable seamless connectivity between NetSuite and other **ERP/CRM** systems, as well as diverse business applications, eCommerce platforms (such as **Amazon, BigCommerce, Shopify, etc.), and Electronic Data Interchange (EDI).** By availing our services, you can enhance your business processes and attain a competitive edge.
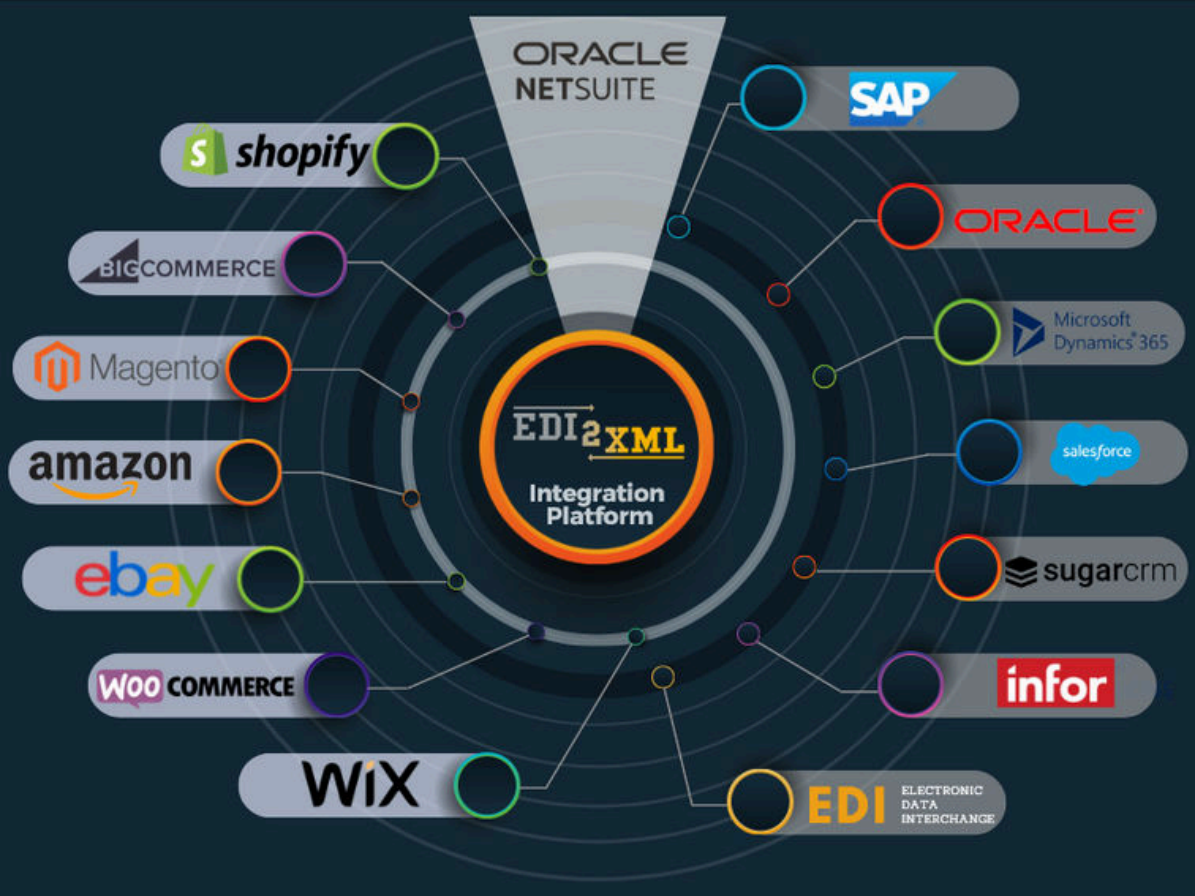

ORACLE NETSUITE INTEGRATION SERVICES WITH ERP AND CRM

02

Improve performance and data quality

We know that ERP and CRM systems are crucial for many businesses. We specialize in connecting NetSuite with popular ERP and CRM systems like SAP, Oracle, Salesforce, Microsoft Dynamics, Sugar CRM, Infor, and others.

With NetSuite integration, businesses can simplify their automation processes and connect different software systems together.

E-COMMERCE INTEGRATION WITH NETSUITE

Integrating eCommerce platforms and Oracle NetSuite can automate several business processes and bring significant benefits to any company.

We offer NetSuite integration services with eCommerce platforms like BigCommerce, Shopify, Magento, Amazon, eBay, and many more.

The following are some examples of processes that can be automated:

Customer Data

The NetSuite integration with your eCommerce platform allows customer data to be automatically synchronized.

Inventory

NetSuite integration allows you to automatically update inventory levels and stock availability in near real-time. It eliminates manual data entry and ensures that your eCommerce site always displays accurate inventory information.

Order Fulfillment

An order placed on your eCommerce website can be automatically sent to NetSuite for fulfillment. The result is a more efficient and error-free order fulfillment process.

Payment

tegration ensures a seamless transfer of payment information between the e-commerce platform and NetSuite. It can help improve your financial data's accuracy and reduce errors

EDI INTEGRATION WITH NETSUITE

EDI (Electronic Data Interchange) is a common method for exchanging business information such as purchase orders (EDI 850), invoices (EDI 810), Inventory Inquiry/Advice (EDI846), and many more EDI documents electronically.

Fully Managed Service

One way to integrate NetSuite with EDI is to use Fully Managed EDI Service. This service allows incoming EDI documents to be converted into a format that can be processed by NetSuite.

Fully Managed EDI service ensures that all incoming EDI documents are automatically imported into NetSuite without requiring manual data entry.

For outgoing documents, the managed EDI service converts them to the required format (e.g. X12) and sends them to your business partner.

Web Service

Alternatively, businesses can use an HTTP EDI Web Service (REST API) to integrate EDI with NetSuite. Companies can use the EDI2XML REST API service to send and receive EDI documents such as invoices, purchase orders and other. The API supports X12 and EDIFACT standards, as well as other EDI document standards.

APPROACHES TO INTEGRATE NETSUITE

05

There are several methods available for integrating NetSuite with other systems. Here are a few common approaches:

API Integration

One of the most common methods is through the use of APIs (Application Programming Interfaces) or web services. NetSuite offers a range of web services, that allow developers to build custom integrations between NetSuite and other systems. These web services can be used to extract data from NetSuite, update records, or trigger actions within the system.

Magic xpi for NetSuite Integration

To efficiently integrate with NetSuite, we recommend the use of third-party integration platforms like Magic xpi. **Magic xpi** integration platform provides pre-built connectors to easily connect NetSuite with other applications and business systems such as Salesforce, SAP, Microsoft Dynamics, and many more. This can be a quick and cost-effective way to integrate with NetSuite, as the connectors are pre-built and require little configuration.

NetSuite integration is a powerful way for businesses to improve efficiency, accuracy, and automation. By connecting NetSuite with other systems and applications, businesses can share data, improve the quality of data, and automate processes.

Whether through APIs or third-party integration platforms, NetSuite integration is essential for companies looking to get the most out of their technology investments.

Contact us today to learn more about how we can help you to take full advantage of NetSuite's capabilities through our integration service offerings.
